Proposed Standard Socket Numbers

I propose that there be a czar (me ?) who hands out official socket
numbers for use by standard protocols. This czar should also keep track
of and publish a list of those socket numbers where host specific
services can be obtained. I further suggest that the initial allocation
be as follows:

Sockets	Assignment
0-63	Network wide standard functions
64-127	Host specific functions
128-239	Reserved for future use
240-255	Any experimental function

and within the network wide standard functions the following particular
assignment be made:

Socket	Assignment
1	Telnet
3	File Transfer
5	Remote Job Entry
7	Echo
9	Discard

these socket numbers (decimal) are to be used for the socket called "L"
in the official Initial Connection protocol (ICP) as specified in NIC
7104 the "Current Network Protocols" notebook.
